## Acknowledgements

This project could not have been completed without the generous feedback and assistance from the following individuals. I am greatly indebted to them for their kind assistance during various stages of this project.

- Dr Shabnam Asghari, Professor, Dept of Family Medicine, Memorial University of Newfoundland
- Dr Carmel Casey, Clinical Assistant Professor, Dept of Family Medicine, Memorial University of Newfoundland
- Dr Amanda Hall, Assistant Professor, Dept of Family Medicine, Memorial University of Newfoundland
- Hussain Khan, Software Engineer
- Dr Joel Koops, Assistant Professor, Dept of Family Medicine, Memorial University of Newfoundland
- Tyler Oke, Clinical Pharmacist, James Paton Memorial Regional Health Centre, Central Health
- Alex Ryan, Clinical Pharmacist, Pharmaceutical Services, Department of Health & Community Services

Every effort has been made to ensure the accuracy of this document. Nonetheless, please refer to the websites referred to in this document for the most up-to-date information on pricing and coverage issues. Please direct any questions, corrections, or feedback to [hasnaink@mun.ca](mailto:hasnaink@mun.ca).

## **Prescription Drug Costs in Newfoundland and Labrador**

### **Introduction:**

This resource has been designed as a point-of-care reference guide for clinicians in Newfoundland and Labrador (NL) to quickly and easily access the approximate cost of drugs commonly prescribed in the general practice setting. It is inspired by a similar reference guide produced every 2 years by the Alberta College of Family Physicians<sup>1</sup>. The drug listings are organized by classes, allowing for quick comparison of drug prices within a class as well as their coverage status under the Newfoundland and Labrador Prescription Drug Program (NLPDP). It is hoped that this will permit clinicians and patients to make more informed decisions about therapeutic choices especially when patients' financial constraints are a significant barrier to accessing drugs.

### **Background and Rationale:**

Prescription drug costs in Canada are an important obstacle to achieving equity in healthcare and pose a significant burden on individual patients and healthcare systems. Despite having a publicly funded healthcare system, drug costs in Canada remain among some of the highest in the world.<sup>2,3</sup> High drug costs can impact patients' ability to adhere to treatment.<sup>4</sup> In fact, as many as one in ten Canadians have reported foregoing prescription medications due to high costs.<sup>5</sup> Similarly, drug costs pose a significant financial burden as illustrated by differences between immediate release and long acting Metformin. A recent systematic review found there to be no clinically relevant difference in outcomes or severity of adverse effects between Metformin and Metformin XR.<sup>6</sup> Yet in Alberta alone over 10,000 patients use long acting Metformin annually, which has a 10-fold higher price than the immediate release Metformin; changing to the latter would result in estimated savings of \$8 million a year in that province alone.<sup>7</sup> However, despite the pervasiveness of 'cost-related nonadherence,' most physicians tend to have poor understanding of the costs of the drugs that they prescribe, even as they acknowledge that drug costs are an important consideration in their prescribing process.<sup>8</sup> In several studies, when physicians gained more knowledge of drug prices it resulted in changed behaviours and prescription of less expensive but equally effective drugs.<sup>9</sup> Unfortunately, the actual cost of any prescription drug to individual patients results from the complex interaction between the actual cost and the degree of insurance coverage, if any. In Canada, limits on the prices of original patented products are set nationally by Patented Medicines Prices Review Board (PMPRB). Following the expiration of the patent (a duration of 20 years), generic equivalents can be sold and the prices for these are set individually by provinces and territories. Furthermore, what an actual patient pays at the point of sale is determined by the degree of insurance coverage, if any, that they might hold. Thus, the combination of high prices and variety of insurance coverage makes it extremely difficult for clinicians to have good insight of the overall cost to patients of specific medications. As a result, prescribing decisions often occur without taking into consideration drug costs.

This information vacuum needs to be addressed to ensure prescribing that is cost-effective for patients. One suggestion to address this need has been for legislation to ensure that provincial and territorial drug formularies are integrated into electronic

medical records (EMRs) to allow physicians to see drug costs during the prescribing process.<sup>10</sup> Gorfinkel et al have provided a blue print with three levels of increasing support to foster drug cost transparency: the first level would allow for drug costs to be visible in EMRs, second would allow the prices of all alternatives in the same therapeutic classes to be visible with costs, and finally the third would feature an alert system that would need to be overridden by the clinician to prescribe a drug over a cheaper alternative in the same therapeutic class.<sup>11</sup> An assessment of prescription drug expenditure in 2013 by Littman and Halil found that cost-effective prescribing in just several classes would yield annual savings more than half a billion dollars nationally.<sup>12</sup> Therefore, given the impact that drug prices have on adherence, it was felt that a resource which allowed physicians to quickly access and compare the list prices of commonly used drugs would aid in cost-effective prescribing decisions.

### **Data Sources:**

The vast majority of data, including drug prices, in this document have been obtained from the Newfoundland and Labrador Interchangeable Drug Products Formulary (NIDPF)<sup>13</sup>. The NIDPF lists [generic] drugs which have therapeutic equivalence to a reference [branded] product.” The legislation governing the NIDPF aims to assist people of Newfoundland and Labrador to access prescription drugs at a reasonable cost. The legislation states that persons authorized to dispense drugs in NL “must dispense either the lowest price brand of the drug within a category listed in the NIDPF or another approved substitute brand of that drug at the lowest price listed in the NIDPF.” When a client chooses to purchase another brand, for instance, the original patented product, they must be notified of the price difference prior to the drug being dispensed. Other information, such as the coverage status of a drug has been derived directly from the NLPDP. The NIDPF is usually updated twice a year; every effort has been made to ensure that this document reflects the latest NIDPF update on 01 October 2021.

### **Resources for Physicians:**

- A beta version of this tool can be accessed on the web at: <http://www.rxprices.ca>
- For any NLPDP Coverage Questions call **1-888-222-0533**
- For coverage/cost info, search the NLPDP database here: <https://www.health.gov.nl.ca/health/prescription/newformulary.asp>
- For information and special authorization requests forms for NLPDP, visit: <https://www.gov.nl.ca/hcs/prescription/covered-specialauthdrugs/>

## Understanding Drug Prices

In Canada, limits on the whole sale prices of patented drugs (i.e., original branded products) are set nationally by the Patented Medicines Prices Review Board (PMPRB) to ensure that these are not excessive.<sup>14</sup> These limits apply to both prescription and over-the-counter medications. Patented products must be sold by the patentee at or below the limits set by PMPRB. However, the PMPRB does not have any influence over how much wholesalers or individual pharmacies may charge. Of note, patents last 20 years in Canada and once a drug patent expires, PMPRB no longer has jurisdiction over its pricing.

Prices of most generic drugs, i.e. those that are no longer under a patent, are set individually by provinces but coordinated nationally for the most part through the pan-Canadian Tiered Pricing Framework (TPF).<sup>15</sup> In Newfoundland and Labrador, generic drug prices must be sold at the retail price (usually calculated per tablet, per gram, or per ml) listed in the NIDPF. The pharmacy's mark-up is included within the retail price listed in the NIDPF and this document. Of not, some drugs are not included in provincial formularies even though they are no longer under a patent.

In addition to the drug cost, patients pay a dispensing fee for each drug. There are no restrictions on how much a pharmacy may charge for dispensing drugs. In the case of many commonly used generic drugs, i.e., Metformin, the actual cost of the drug may be much lower than the dispensing fees. However, usually pharmacies charge cash paying customers at the same or similar rates to those negotiated by NLPDP or private insurers.

### Price Structure for Generic Drugs

Cost Structure	Generic Drugs	Patented/Branded Product	Non-Formulary Drugs	Payment Structure
Retail Drug Cost	Set by pan-Canadian Tiered Pricing Framework, listed on NIDPF	“Factory gate price” set nationally by the PMPRB for patented products. No limits on non-formulary products, whether generic or ‘branded’.	No price control.	May be partially or fully covered by NLPDP or private insurance
Mark-up	Included in the NIDPF list price	Set by individual pharmacy	Set by individual pharmacy	As above
Dispensing/Professional Fee	Set by individual pharmacy	Set by individual pharmacy	Set by individual pharmacy	As above

## How to Use This Document

The medication included in this guide are generally grouped by organ systems and sub-grouped by class or mechanism of action. This is to allow clinicians to easily determine the expected retail cost of the drug (excluding the dispensing fee) and the price differences between drugs within a class.

Generic Name	Brand Name	Strength	Dosing	Supply	Generic Cost	Branded Cost	NLPDP Status
<i>Lipid Lowering Agents: Statins/HMG-CoA Reductase Inhibitors</i>							
Atorvastatin	Lipitor	10mg	QD	30 days	\$5.70	\$68.78	Open

**Generic Name:** Refers to the chemical name of the specified drug.

**Brand Name:** This is the original patented drug product, which may or may not be under a patent.

**Strength:** This shows the various strengths that the drug is commonly available in.

**Dosing:** This refers to the dosing frequency. In cases where multiple dosing frequencies exist for the same or multiple indications, the most commonly used indication or dosing schedule has been used.

**Supply:** This is the quantity (often in number of days) for which the price of the drug has been calculated. For instance, the 30-days supply of a drug that has BID dosing would mean 60 tablets.

**Generic Cost:** This is the retail drug price as per the NIPDF and all pharmacies in the province must sell the generic products (if it is in the NIPDF) at this price. It does not include the dispensing fee.

**Branded Cost:** This is the approximate price of branded drugs. As pharmacies can set any mark up for these medications, the actual cost the patient pays will likely be higher and will differ between pharmacies. The cost listed here is obtained from NIDPF/NLPDP.

**NLPDP Status:** This column indicates whether the drug is covered by the NLPDP. If listed as Open, then NLPDP covers the drug and generally with minimal or no restrictions. If 'SA', then the NLPDP requires prior special authorization for the drug to be completed by a physician. If using the electronic version of this document, then there is a link to the specific requirements on the NLPDP website. N/A means that the drug in question is not covered by the NLPDP.

## The Newfoundland and Labrador Prescription Drug Program

This program provides variable degrees of prescription drug coverage for those residents of NL who otherwise do not have any other third-party coverage i.e. private insurance.<sup>16</sup>

Plan Name	Eligibility	Application Process	Coverage
<b>The Foundation Plan</b>	Persons and families in receipt of income support benefits through Dept of Advanced Education & Skills	Automatically issued when patient is in receipt of income support benefits	100% of eligible prescriptions
<b>The 65Plus Plan</b>	Persons in receipt of Old Age Security Benefits (OAS) and the Guaranteed Income Supplement (GIS)	Automatically issued when Dept of Health & Community Services notified by Service Canada that an individual is in receipt of OAS/GIS	Coverage of eligible prescription drugs Beneficiaries pay dispensing fee up to \$6
<b>The Access Plan</b>	Individuals and Families with low income: - Families with children, including single parents with net annual income of \$42,870 or less - Couples without children with net annual incomes of \$30,000 or less - Single individuals with net annual incomes of \$27,151 or less	<a href="#">Application</a> required. Patients can call 1-888-859-3535 for further information	Amount of coverage determined by net income level and family status
<b>The Assurance Plan</b>	Coverage for individuals or families, even if they have private insurance, when eligible drug costs exceed: - 5% of net income for those earning below \$40,000 - 7.5% of net income for those earning between \$40,000-\$75,000 - 10% of net income for those earning between \$75,000-\$150,000	<a href="#">Application</a> required. Patients can call 1-888-859-3535 for further information	Beneficiaries responsible for co-payment depending on income levels and eligible drug's cost.
<b>The Select Needs Plan</b>	NL residents with Cystic Fibrosis and Growth Hormone Deficiency	No application necessary. DHCS notified by Eastern Health when diagnosis of CF or GHD is made	100% coverage for disease specific medications and supplies
